

Assignment No: -13

Problem statement: Create a workmail for your organization.

The steps are as follows: -

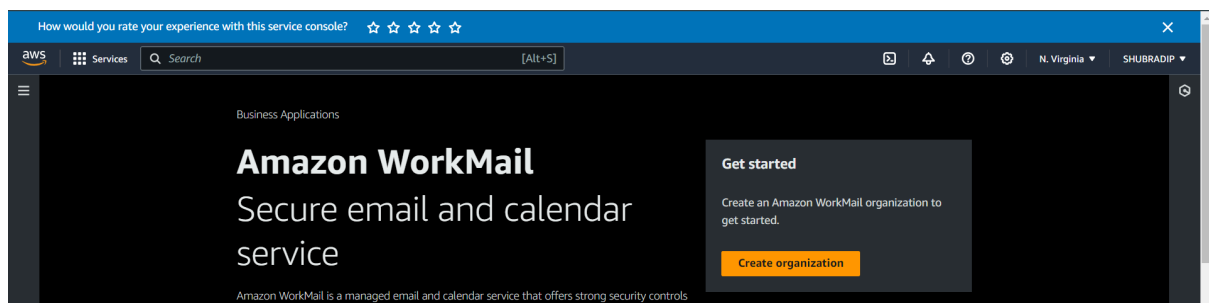

1. Navigate to the AWS console and locate the "**Work Mail**" service. Click on the first option that appears in the search results.

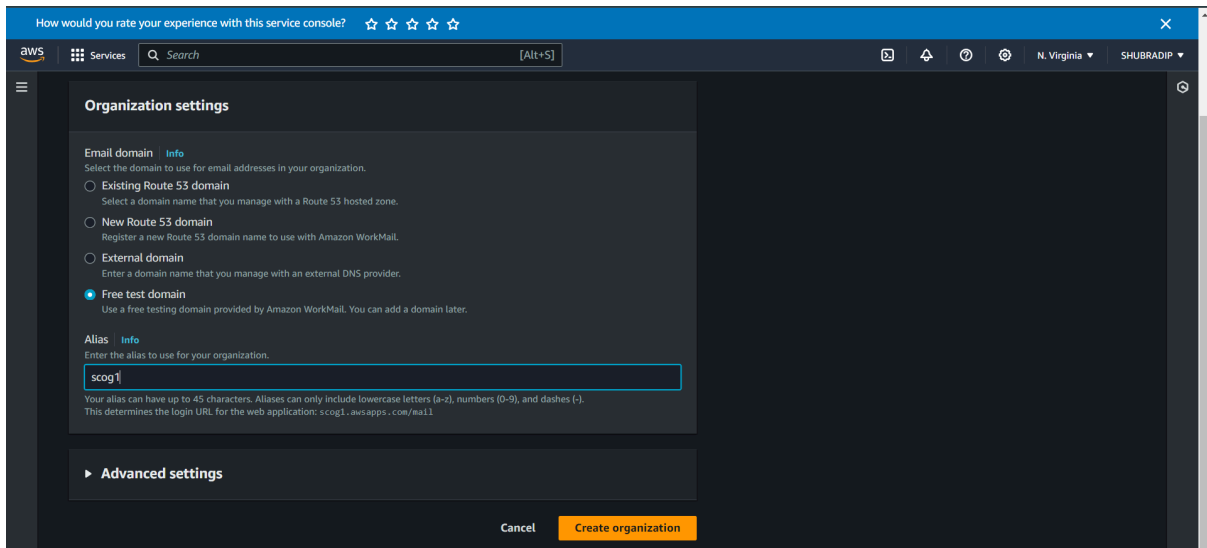

2. Choose a region from the list of supported regions. For this example, select "**US East (N. Virginia)**".

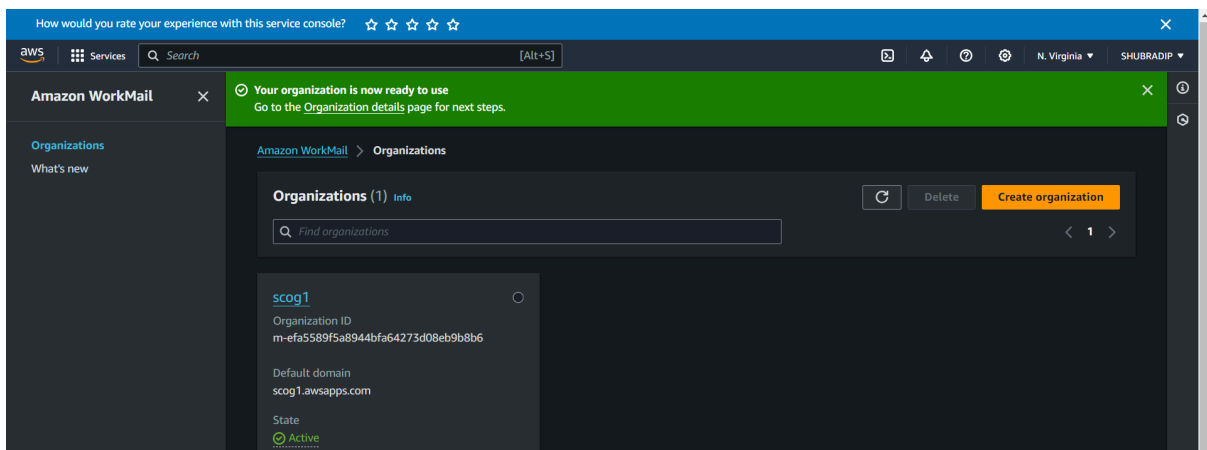

3. Click on "**Create organization**".

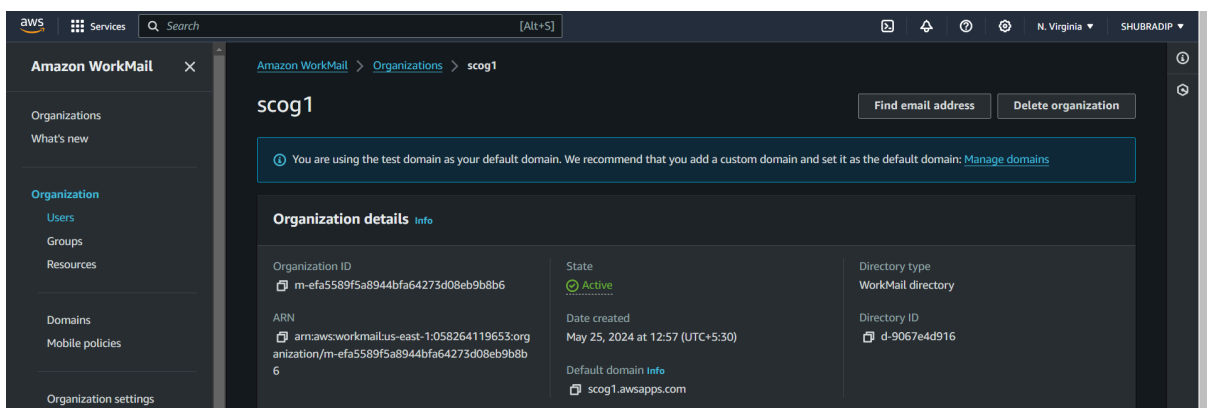

4. Select the "**Free test domain**" option from the available email domains. Then, enter an organization name, such as "**scog1.**"

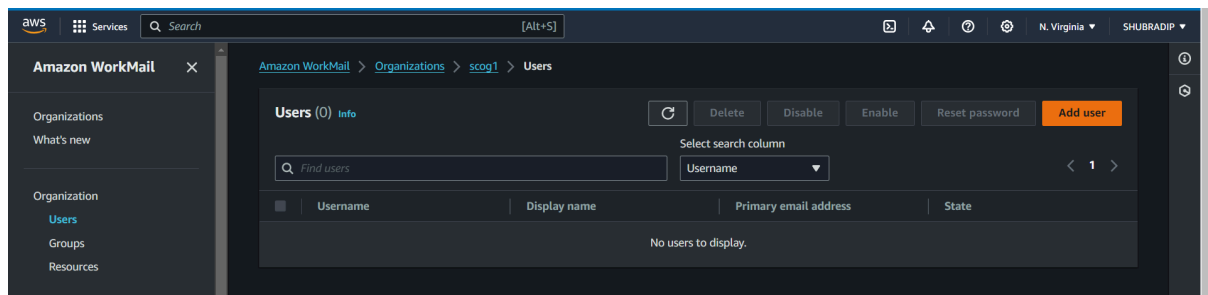

5. Once the organization is successfully created, click on the organization name.

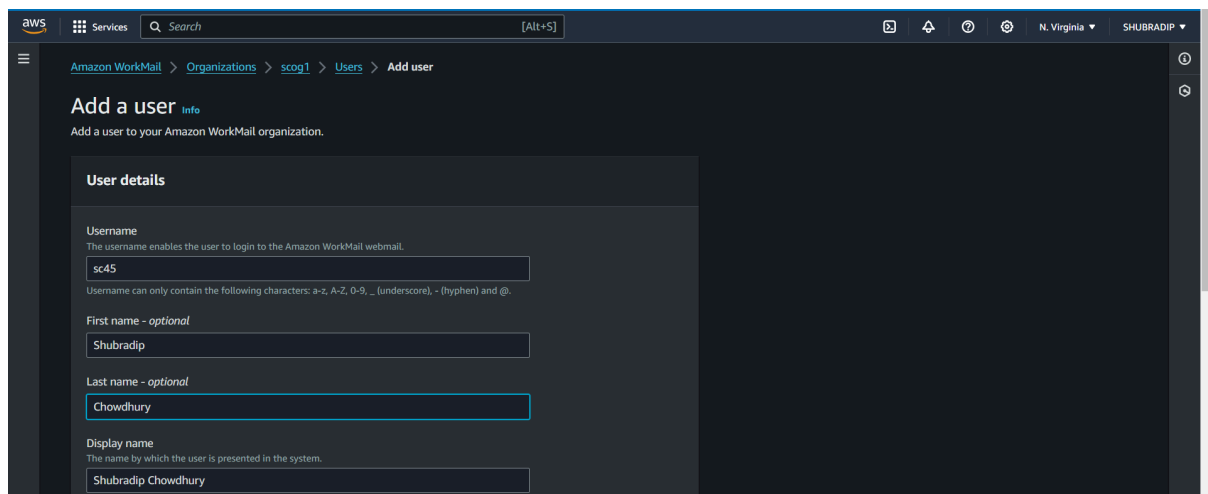

6. From the left pane, navigate to "Users" under the Organization category.

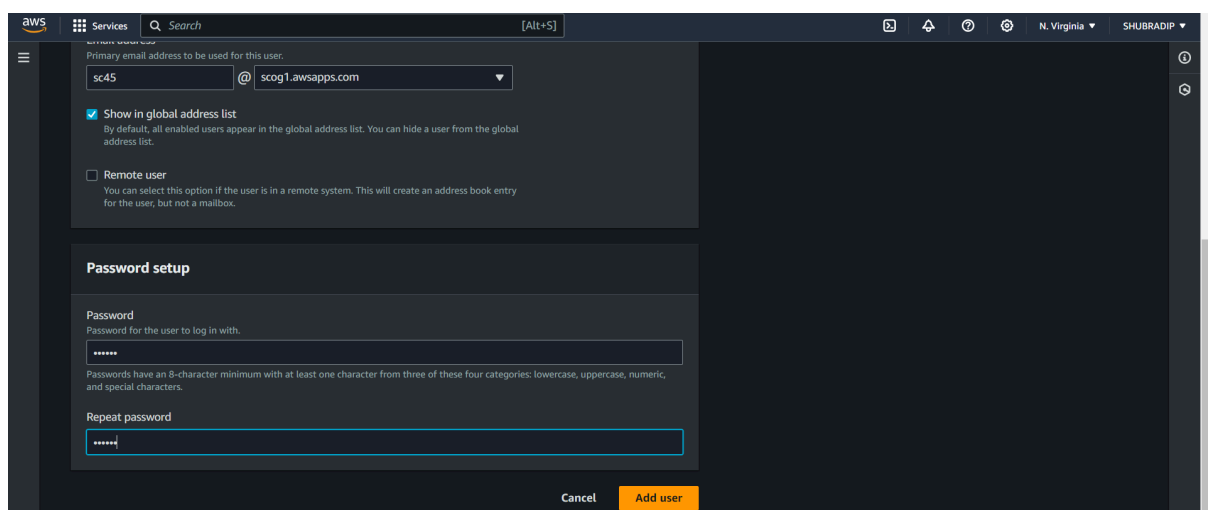

7. Then proceed to click on **“Add user”**.

8. Enter the username, first name, and last name in their respective fields. The display name will be generated automatically.

9. Next, set a password for the WorkMail account according to the provided guidelines.

10. Proceed to click on **“Add User”**.

The screenshot shows the 'Add user' page in the AWS IAM console. The 'Primary email address to be used for this user' field is set to 'sc45@scog1.awsapps.com'. The 'Show in global address list' checkbox is checked. The 'Remote user' checkbox is unchecked. The 'Password setup' section shows a password field and a 'Repeat password' field, both with masked characters. At the bottom right, there are 'Cancel' and 'Add user' buttons.

11. After successfully adding the user, return to the organization's page, click on the organization name, and navigate to the **“Amazon WorkMail web application”** link to proceed.

The screenshot shows the 'scog1' page in the Amazon WorkMail console. The left sidebar contains a navigation menu with 'Organizations', 'What's new', 'Organization', 'Users', 'Groups', 'Resources', 'Domains', 'Mobile policies', 'Organization settings', 'Tags', 'Access control rules', 'Retention policies', and 'Impersonation roles'. The main content area displays the 'scog1' organization details. A blue banner at the top states: 'You are using the test domain as your default domain. We recommend that you add a custom domain and set it as the default domain: [Manage domains](#)'. Below this, the 'Organization details' section shows the following information:

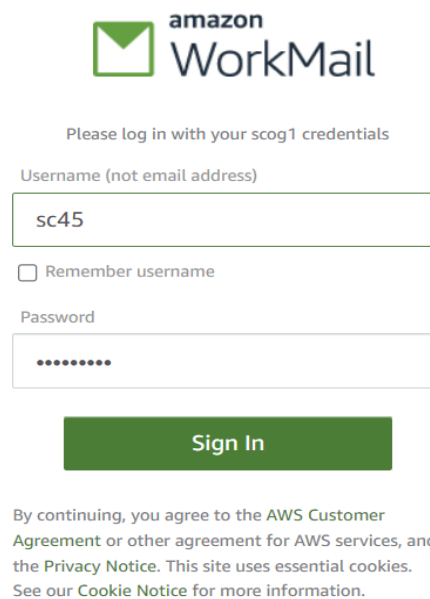

Organization details		
Organization ID	State	Directory type
m-efa5589f5a8944bfa64273d08eb9b8b6	Active	WorkMail directory
ARN	Date created	Directory ID
arn:aws:workmailus-east-1:058264119653:organization/m-efa5589f5a8944bfa64273d08eb9b8b6	May 25, 2024 at 12:57 (UTC+5:30)	d-9067e4d916
Default domain		
scog1.awsapps.com		

Below the organization details, the 'User login' section provides links for 'Desktop or mobile apps' and 'Amazon WorkMail web application'.

Amazon WorkMail web application: <https://scog1.awsapps.com/mail>

12. Now, enter the username and password to access your WorkMail account.

The image shows the Amazon WorkMail login interface. At the top is the Amazon WorkMail logo. Below it, a message says "Please log in with your scog1 credentials". There are two input fields: "Username (not email address)" containing "sc45" and "Password" with masked characters. A "Remember username" checkbox is between them. A green "Sign In" button is at the bottom. Below the button is a disclaimer about the AWS Customer Agreement and Privacy Notice.
