

Problem Statement: Create Mfa For Authentication.

Solution:

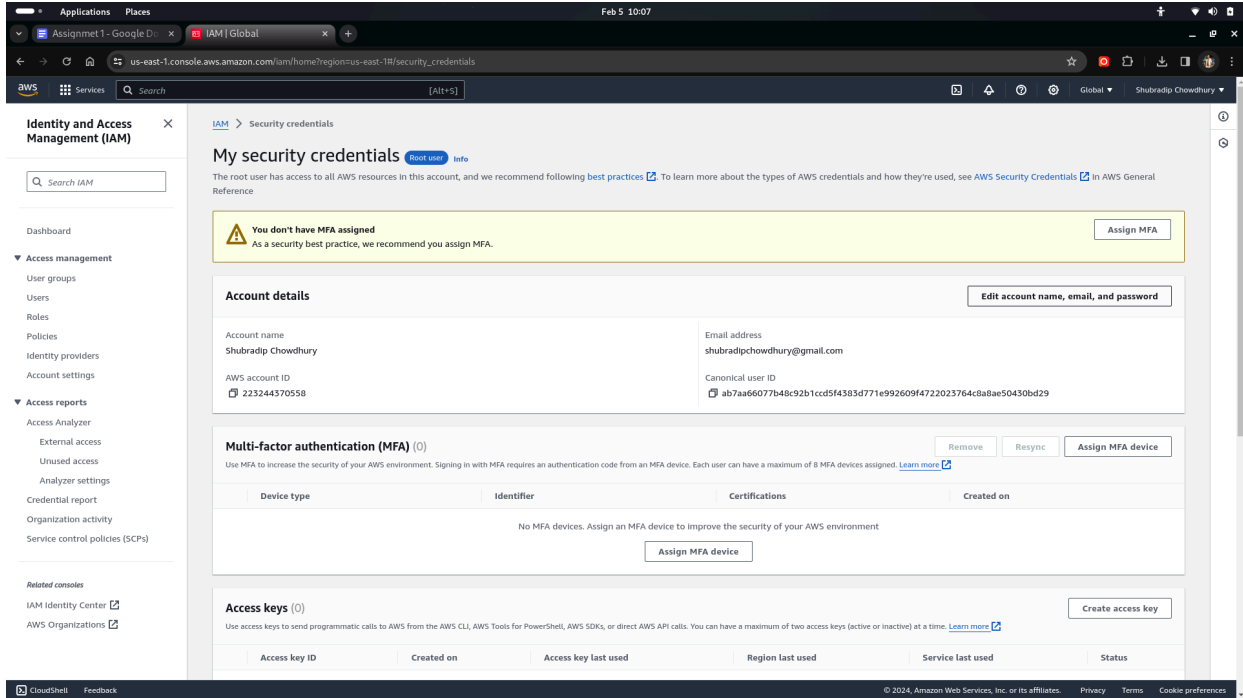

1.Login to AWS account.

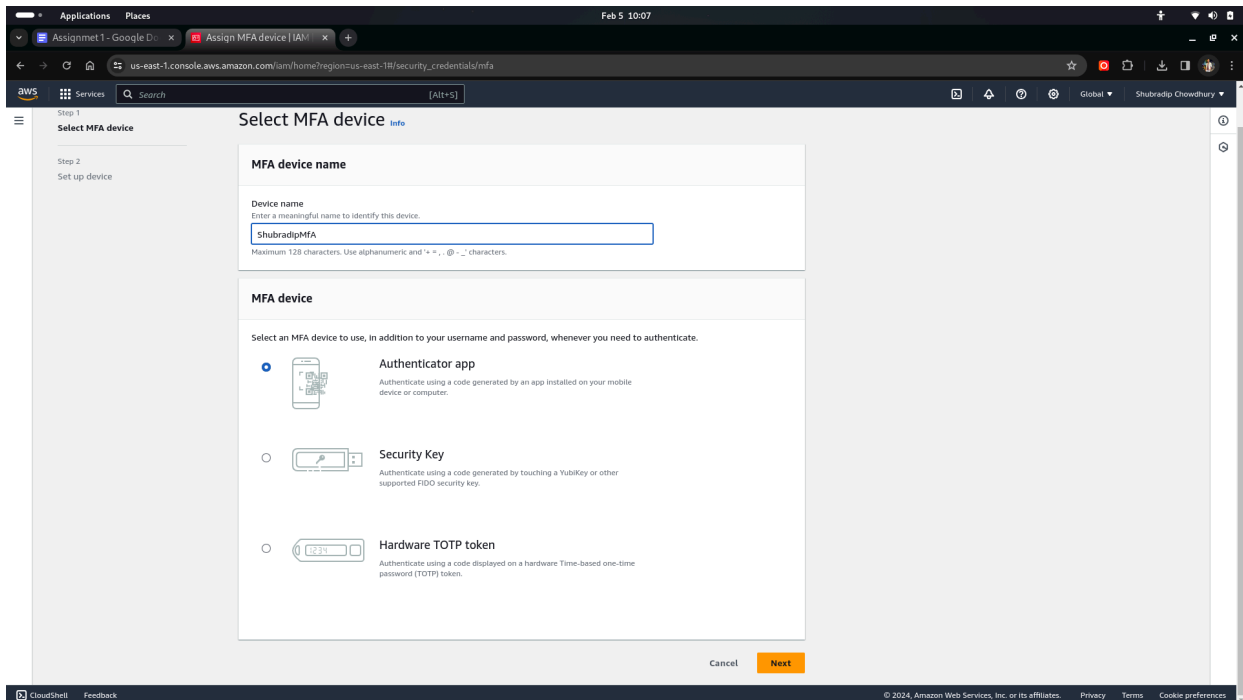

2 Go to Security and Credentials.

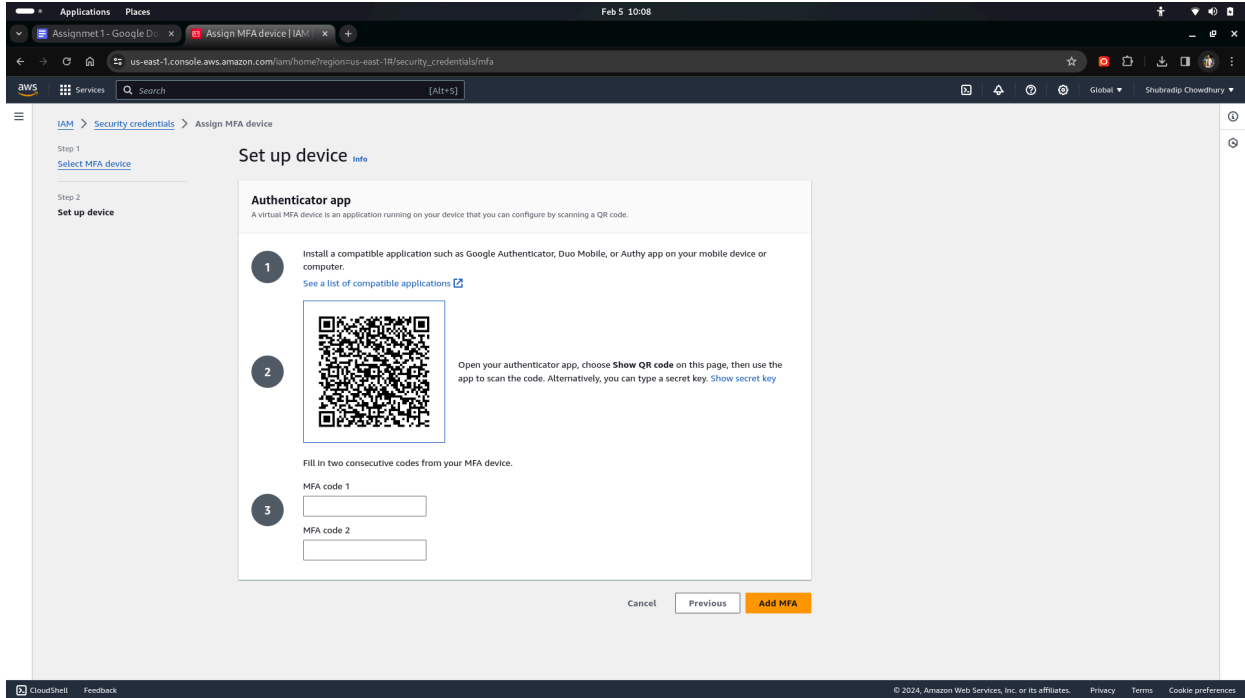

3.Tap on “Assign MFA device”.

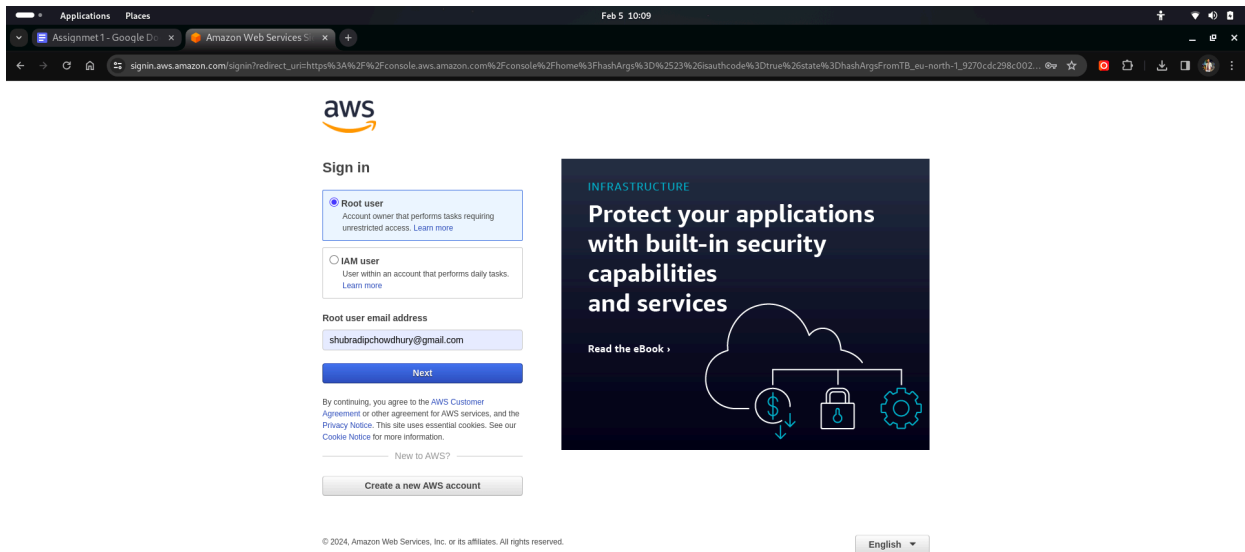

4. Add MFA device and select MFA device.

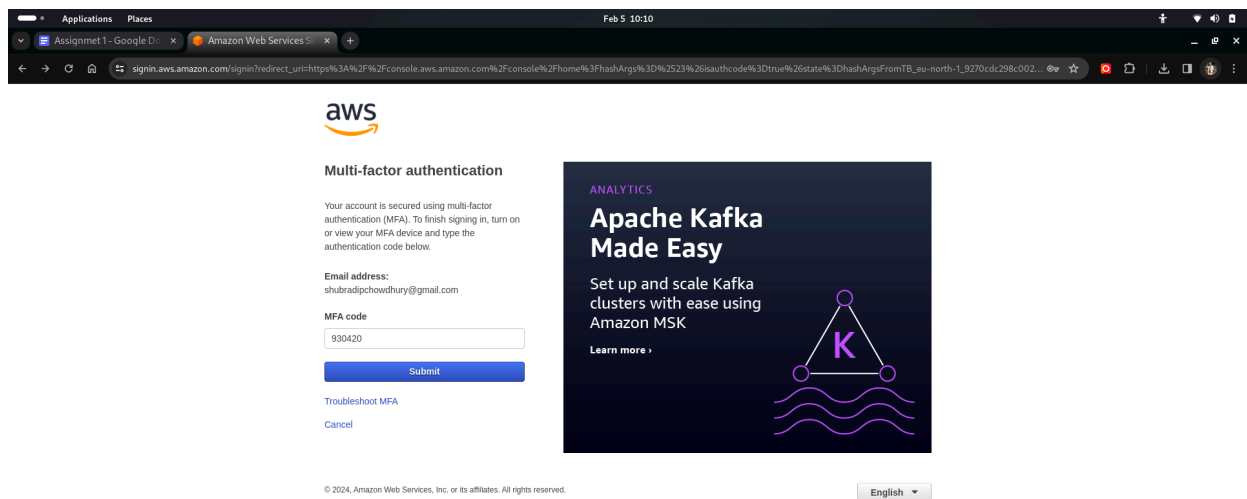

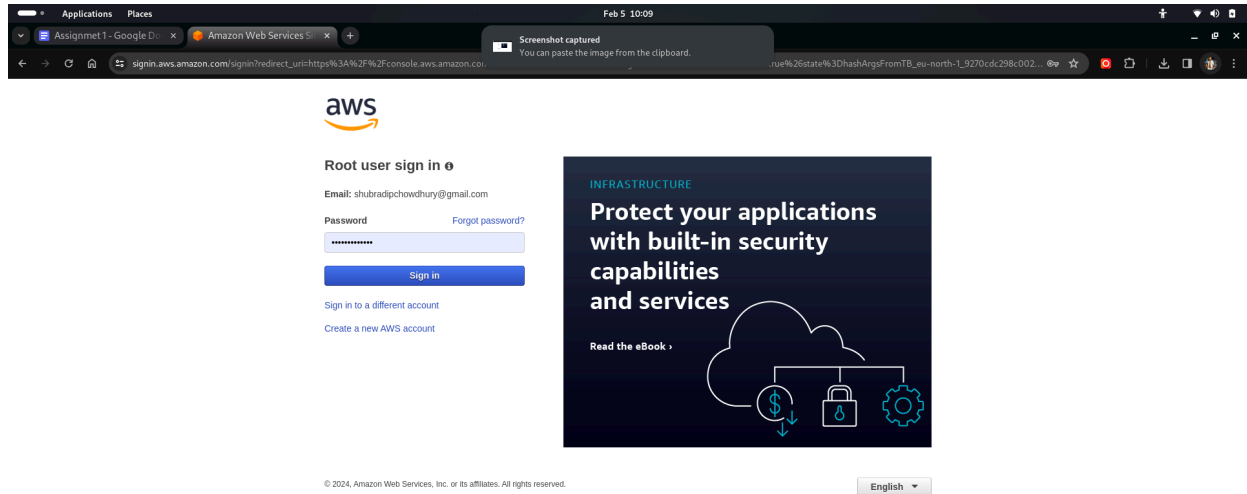

5. Set up device by Scanning the Qr using an Authenticator App(Google) and provide the MFA codes received in authenticator app.

6. Now login again. And this time we have to provide a MFA code from the authenticator app.

7. Now again go to Security Credentials and Delete the MFA.

Cost and usage

No cost and usage data to show

This could be because we are preparing your cost and usage data, or you don't have enough usage across AWS.
